

FCS WinPDA

Improving inter-departmental communications with wireless technology

Look no wires!

The advent of FCS WinPDA will see a dramatic shift away from the traditional approach in which orders are taken and relayed. By integrating a wireless PDA solution with FCS WinPOS, the wait staff can now take orders on their personal digital assistants and relay the orders via wireless transmission. This technology allows wait staff to take guest's orders more efficiently and relay orders at the touch of a button! No more lost order sheets or wandering back and forth around the room submitting orders.

□ Feature List

- Offline operation - Allows POS Client to continue functioning when connection to server is down. Also able to resynchronize data back to server when connection is online.
- Revise settlement - Load a settled bill/check and make modifications.
- Labor shift period- Labor clock-in and clock-out functions.
- Membership.
